

## InforFlex Upgrade 2010

### A low-cost, low-risk route to a future-proofed solution for your business

Working in partnership with Infor to deliver a package of software and services, CSI offers BPCS and PRMS users a low-cost, low-risk route to upgrade to the latest version of Infor ERPLX. ERPLX FP3 is available now with FP4 scheduled for general availability in October 2010.

Flex Upgrade now offers significant benefits, including automatic entitlement to all core ERPLX modules, IDF, Infor MyDay - a business portal tailored to eight key pre-defined business roles, a comprehensive set of extension products and a rapid implementation methodology.

Flex Upgrade gives users access to Infor's innovative service-oriented architecture (SOA) capabilities through the Infor Open SOA framework. This approach is already delivering enhanced functionality through Infor MyDay and IDF. Infor Open SOA will also deliver a number of strategic extension products that will be made available through the rest of 2010, 2011 and 2012.

BPCS users with valid OPS agreements are automatically entitled to Flex Upgrade but the programme is available to all BPCS and PRMS users. CSI would be pleased to explain how the Flex Upgrade programme can be applied to your unique situation.

If you would like to discuss Infor's Flex Upgrade programme in more detail, in relation to your own business requirements, please contact David Maskrey at CSI.

# InforFLEX

### Infor Flex Upgrade Summary

A rapid, low-cost way for customers to adopt and benefit from Infor's extensive product innovations, by adopting the current release of ERPLX and a wealth of other SOA-enabled product offerings.

Flex Upgrade enables customers to achieve enhanced business agility and functionality at low cost and with substantially less risk and uncertainty than the rip-and-replace approaches of competing vendors.
