## COMPLIANCE AS A SERVICE

### Detect. Correct. Protect.

Why try to continually keep up with compliance when CSI's Compliance as a Service can get you out in front?

No more manual checks during system builds, time-consuming reworks or risk-increasing handoffs. By implementing an automated compliance service, the combination of detect and correct gives CSI the ability to deliver zero defect systems, mitigating your risk and protecting your brand reputation with more accuracy and less cost.

## TRANSLATE CODE INTO COMPLIANCE

As IT environments grow, the operational cost of manual configuration and deployment can spiral out of control. Defining infrastructure as code ensures that configuration policy is flexible and verifiable. By continuously evaluating systems against a pre-defined desired state, CSI can prevent configuration drift, universally apply changes and translate code into compliance.

Clearly translating compliance into code allows you to precisely define statements of policy and move risk from runtime to build and test.

CSI's continuous compliance identifies issues early and automatically inspects systems while alerting where remediation is required. We remove time spent on manual checks during system build by over 90% which reduces time to delivery. CSI offers almost 200 ready-made profiles containing over 18,000 controls giving the ability to complete specific audits continuously on any platform.

Continuous change is here to stay and automation is a critical approach to maintaining control at a speed impossible to deliver manually. Digital transformation success comes from reducing 'development friction' and moving from inception to delivery quickly and securely. CSI can implement automation to create an environment where you can consistently and safely ship applications across your IT estate – whether on-premise, in the CSI PowerCloud or in public cloud platforms like IBM Cloud, Microsoft Azure or AWS.

Once deployed, CSI will continuously test and audit your applications and infrastructure. We do this by comparing the actual state of your system with the desired state that together we have already defined and any violations are detected and reported for remediation. The validation of compliance and security in your environment can be based on customised tests, ready-built tests from our extensive knowledge base - or both.

### “Highly Evolved Organisations are...”

- 44 times more likely to deploy automated testing
- 27 times more likely to use configuration management tools
- Twice as likely to be automating services for broad use

YOUR PERPETUAL EDGE

# TECHNOLOGY IS THE MEANS. OUTCOMES ARE THE END.

The world cares less and less about the specific IT and more and more about what it can do.  
That's why we take a technology-neutral, outcomes-biased approach.

## GROW

Our expertise in securely optimising digital performance means that whether you need to enhance app performance, harness emerging technology or liberate talent to focus on innovation, we can enable you to create customer experiences that drive next-level satisfaction, loyalty and growth.

## SAVE

Against a cost-conscious backdrop CSI delivers critical compute 'on-demand' and provides an opex financial model for data and applications. It means your capital can be refocused on value creation and your business can obtain and sustain a cost advantage.

## INNOVATE

Whether it's translating workload data into business intelligence, creating future-proof architecture or enabling your business to delegate resource-hungry core IT, CSI can help you find and exploit a perpetual edge.

## PROTECT

At CSI, we employ our expertise to identify weaknesses before cyber criminals do and we deploy machine learning to reduce zero-day threat to as close to zero threat as possible.
