

# APPLICATIONS

## IT AUTOMATION, MIDDLEWARE, ERP

### Translate our relationships into your advantage

Applications no longer just help run the enterprise, they are the enterprise. They're how you drive new business models, accelerate time to market and optimise operating costs. They're how customers and prospects interact with your brand, the experience it creates and the loyalty it builds.

Agility in today's volatile operating environment is critical to success. It means operational excellence and financial management are key.

CSI has over three decades of experience of successfully delivering ERP and middleware projects and this is complemented with leading IT automation processes that remove the burden of manual intervention, reducing errors and accelerating implementation of secure and compliant environments.

### IT AUTOMATION

Competing in the digital economy requires infrastructure that is flexible and can support rapid need for change. As environments grow, manual practices quickly become unfeasible. IT automation drives down costs and delivers agility and velocity.

Migrating to a new automation solution is a daunting challenge for any organisation. However, with the right migration strategy, organisations can overcome the migration hurdle and ensure a low-risk move to their new solution.

CSI's automation tools, skillset and knowledge are used by our clients to meet compliancy, improve efficiency and leverage best practice.

### MIDDLEWARE

Today, organisations interact through many technology interfaces including mobile, cloud-based, and on-premises applications. Connecting these systems with point-to-point integration becomes extremely complex as additional components are added.

Middleware acts as a hidden layer enabling effective and efficient data management and communication for distributed applications - in turn, improving business agility and accelerating innovation.

CSI's wealth of experience of integrating middleware solutions such as IBM APP Connect Enterprise (formerly IIB) and MQ enterprise messaging provides you with a flexible framework of best practices and governance.

### ERP

A modernised cloud-delivered ERP system can be the strong foundation that company needs to reach the next level - whether it's growing opportunities, saving costs, investing for business improvement or enabling a new business model.

CSI specialises in migrating ERP workloads to the right cloud to deliver the right outcomes. Whether you are using SAP, Infor, Oracle or other ERP system, CSI is uniquely placed to help optimise your enterprise performance.

If you want to revitalise your ERP existing platform, or want to embrace the shift to digital transformation, CSI's experience can be put to work to meet your goals.

### "Automation Lessons For 2019"

- Automation puts focus on the future
- Automation helps you shift resources to innovation
- Automation means communicating your plans with staff

# TECHNOLOGY IS THE MEANS. OUTCOMES ARE THE END.

The world cares less and less about the specific IT and more and more about what it can do.  
That's why we take a technology-neutral, outcomes-biased approach.

## GROW

We help unlock our clients' capital and liberate their IT teams so that both can be redeployed to optimise digital performance and secure new levels of growth.

## SAVE

We enable our clients to operationalise lean business models and harness the kind of efficiencies that translate cost management into competitive advantage.

## INNOVATE

Our deep expertise in optimising digital performance in commercially critical environments means our clients can deliver new experiences and value, at new speed and scale.

## PROTECT

We combine practical experience with cognitive computing to keep our clients' data and reputation safe from harm.
